Skills

- | TypeScript | Express | React | Next | React Query | Postgresql | Git | HTML | CSS | SASS | Tailwindcss
- | Web Development using Next 14.0
- | Frontend | English – *All professional proficiency or above*

- *2+ years' experience using, Nextjs or similar front-end Javascript languages such as React.*
- *2 years' experience in UI/UX design using tools such as Figma*
- *Small Experience with Agile development methodologies*

Experience

Front End React Developer   **Tweek**   *New Zealand(remote)*   **12/2023 - 01/2024**

- Employing Next.js as the core framework, I spearheaded the development of the primary application for Tweek, integrating robust authentication with Nextauth. Leveraging Next.js for seamless functionality, I implemented Tailwind CSS to refine the frontend user interface, ensuring an optimal user experience. In tandem, PostgreSQL served as the backend database solution, facilitating the storage of user profiles, posts, authentication data, and other essential information critical to Tweek's operations.

Front End React Developer   **Roadto100**   *Auckland, New Zealand(remote)*   **12/2023**

- implemented fundamental authentication within the core framework of their website, leveraging Supabase authentication in conjunction with a PostgreSQL table dedicated to authentication management. My role primarily focused on resolving authentication-related issues, with no additional scope intended beyond this specific task.
- Designed and implemented signin/signup pages with tailwind css/html.

React Developer   **Aftertheflood**   *New Zealand (remote)*   **07/2022**

- I spearheaded the design and development of After The Floods user interface, incorporating a pop modal UI and establishing the foundational layout, including default button configurations and navigation, using Next.js. Additionally, I integrated story functionality into the platform's architecture. To enable seamless data management, I utilized Prisma within the Next.js framework, allowing users to input their details, which are then seamlessly stored in the backend PostgreSQL database.
- Used React/css for frontend, prisma/next,

React Developer, Client Contract   **Mychair**   *Auckland, New Zealand (remote)*   **12/2023**

- **Website:** I built this client's website using Astro framework, the latest and fastest framework for implementing fast/reliable, react code within the application.

Education

Mahurangi College NCEA Level 1 - 3

Projects

- **Twitter clone:** Utilized cutting-edge React technology stack for development, orchestrating the primary application architecture through React/CSS. Implemented authentication via Supabase with PostgreSQL integration, complemented by React Router DOM to regulate page access, ensuring unauthorized users are restricted from viewing certain pages.
https://github.com/engelbrechtz/Twitter
- **Mail: A simple** web application using the latest tech stack Next Framework for frontend development along side styling with Tailwind css & Shadcn ui. Understanding the ui design and making it clear for end users. Used postgresql for backend with supabase for authentication.
- **Facebook clone:** This project was done using next version 12. Using firebase as its backend, basic facebook clone setup for posting content on the web application and styled using Tailwindcss
https://github.com/engelbrechtz/facebook
- **Estate Web Application:** My main focus for this project was to learn more about filtering with Reactjs, as I love learning and constant improvement.
